

ISS
Reducing Risk Globally™

Workshop on **Reducing Occupational Health Risk in Pharmaceutical Companies** at Nanu Resort, Goa, India on July 19 and 20, 2010

International Safety Systems, Inc. has been providing technically sound, high quality and cost effective Occupational Health and Safety services in more than 25 countries and 350 workplaces around the world from their offices in **India**, USA, China, Brazil and Mexico.

ISS has conducted industrial hygiene and safety assessments, trainings at more than 100 pharmaceutical companies globally.

**Chief Instructor: Maharshi Mehta, CIH, CSP,
President, International Safety Systems, Inc.**

Maharshi is internationally recognized industrial hygienist with more than 25 years of experience providing consulting in industrial hygiene and safety. He is Certified Industrial Hygienist (CIH) and Certified Safety Professional (CSP) from American Boards.

Maharshi has conducted industrial hygiene assessments and training at some of the world's largest pharmaceutical companies and also at third party manufacturers globally.

Toral Mehta, CIH and **Ritesh Patel, CIH** will be supporting Maharshi in conducting this Workshop. Toral and Ritesh also have extensive experience in risk assessment and controls in Pharmaceutical companies globally.

Reducing Occupational Health Risk in Pharmaceutical Companies in India –The Need:

- Globally, India ranks third in manufacturing pharmaceuticals products by volume.
- More than 250 large and 8000 small manufacturing units
- Rapidly growing, large volume pharmaceuticals manufacturing, third party contract manufacturing and R & D
- Increasing potent drugs
- Only few industrial hygiene professionals with specialized knowledge to reduce occupational health risk

Who Should Attend?

- Environment, Health and Safety professionals
- Line managers, supervisors and manufacturing professionals
- Design engineers and R & D professionals

About the Workshop:

At the end of the training Workshop the participants will learn about

- Health hazards of Active Pharmaceutical Ingredients (API) and commonly used solvents and excipient.
- Qualitative and Quantitative Exposure Assessment Methods
- Surrogate monitoring to determine containment efficiency
- Effective particulate containment for specific pharmaceutical unit operations (e.g., milling, blending)
- Risk Based Exposure Controls and Control Banding
- Local Exhaust ventilation and general ventilation system design
- Safe work practices and respiratory protective equipment

The course you offered was informative and engaging I was impressed with Instructors' knowledge..... Associate Director, Industrial Hygiene, one of the pharmaceutical corporations
